CHALLENGING EVERYTHING. THE OCTANE SUB4 IS RETHINKING FROM THE GROUND UP.

Octane Sub4

A legend comes to North America. For more than 3 decades, RGK has been at the forefront of made-to-measure manual chair innovation. The Octane Sub4 is the result of our obsessive focus on perfecting fit and materials.

The Perfect Fit

Hand crafted to your specifications, with precision to 5mm (.25"), the RGK Octane Sub 4 is an extension of your body, effortlessly moving with you around the tightest corners, up less-than-perfect curb cuts, and across rougher pavement. The Octane Sub4 pushes your mobility to the next level, thanks to our Perfect Fit approach.

Nano Weight

Style, performance, and under 4 kg (8.8 lbs) certified! Alongside the smooth ride, beauty, and lightness, the Octane Sub4's grade 9 titanium is out of this world. Strong as steel, but 45% lighter, titanium has the highest strength-to-weight ratio out of all known metals. Titanium has this wonderful natural quality that absorbs shock and soaks up road vibration, delivering a super-smooth and comfortable ride.

*Transport weight excluding wheels and cushion, and based on 400mm (15.75") rear seat width.

How it Comes Together is Why it Sits Apart

Exquisite materials greet your senses and innovative design exceeds your expectations. Available in both an Open (mono-tube) or Hybrid (dual-tube) the Sub4's frame design, coupled with the industry's first CX6 Cast Carbon Fiber™ components by Spinerger® take performance and style to a whole new level.

The Best is Standard on the Octane Sub4

- Open (mono-tube) or Hybrid (dual-tube) Frame Design
- Tapered Seat
- Polished Titanium Frame
- Spinerger LX Rear Wheels
- 4"x1.5" Aluminum Soft Roll Front Wheels
- Direct Mount Composite Scissor Locks
- Fixed Profiled Carbon Fiber Side Guards
- Color Anodize Components
